At **MRO 2005**, Dallas, Enterprise Ireland is showcasing four leading aerospace companies. Visit Booth 1341 and meet Aerospace Industries, Armac Systems, Flightman and Sifco. Talk with Shannon Development and Enterprise Ireland. In addition, see AEROinformatics on Booth 127.

Invest in Shannon | Ireland

Shannon Development manages Shannon Free Zone, a 243 hectare International Business Park adjacent to Shannon International Airport, Ireland. Overseas companies, attracted by a positive business environment, low corporation tax and a well-educated, skilled workforce use Shannon to serve Europe, the Middle East & Africa (EMEA) and other global markets.

MRO firms such as Air Atlanta Aero Engineering, Hamilton Sundstrand, Lufthansa Technik and Shannon Aerospace have established operations at Shannon. In addition to MRO activity Shannon is also home to a number of firms in aircraft and aircraft engine financing including Debis AirFinance, GE Capital Aviation Services and Engine Lease Finance Corporation – a division of BTM Capital Corporation.

Shannon has a highly developed international business support infrastructure, including a modern broadband telecoms network; air and surface transport links to Europe and the US; a sophisticated sub-supply base, professional service providers and a carefully planned physical environment to meet the needs of international business. Shannon Free Zone has a ready-to-occupy manufacturing, office and distribution space at competitive rents and land available for custom buildings.

Enterprise Ireland is the Trade and Technology Board of the Irish Government. Enterprise Ireland supports a vibrant aerospace sector operating in Ireland. There are over 160 companies supplying products and services from Ireland involved in cost efficient maintenance, repair and overhaul;

software; parts manufacturing; tool design and manufacturing; supply of specialist personnel on contract and consultancy. Irish universities and industry are active partners in the development of technologies, systems and software solutions enabling greater competitive advantage to companies supplying airline, airport and air traffic management organizations.

SIFCO Industries serve 90% of the world's major airlines in the repair of Turbine Engine Components. The SIFCO Turbine Group, a division of SIFCO Industries Inc., specialises in hot section turbine airfoil repair and manufacture.

We provide a world-wide service for turbine components, for land based and aero engines, in the areas of design and manufacture, sophisticated repair processes, high technology coating systems, inventory and logistic solutions.

Capability within the Aerospace sector goes across all major OEMs, from JT8D to PW4000, from CFM56-2 TO CFM56-7 and RB211 to Trent. SIFCO cater to all programme types whether it is cost per flying hour or time and materials.

Cost reduction programmes have been supported by integrated repair development which when done within the auspices of long term agreements have led to huge savings to the Customer Base.

ARMAC Systems - Rotable Inventory Optimization (RIOsys). Armac Systems is an Irish Software Company specializing in inventory solutions for the Airline and MRO sectors.

Reducing inventory costs for Airlines and MRO operations. Airlines and MRO's can save millions of US Dollars and improve dispatch reliability with ARMAC's proprietary rotatable optimization system (RIOsys). Inventory Capital Investment reductions of up to 40% and simultaneous increases in service levels of 10-20% can be achieved. Operating costs are reduced and capital released from spares investment. The system works with existing material planning systems and is easy to use. Installation, integration and training can be completed in days.

Flightman™ sets the standard for aircraft information management solutions by providing a world leading software environment to enable rapid high quality solution development and deployment onto airborne hardware.

Flightman™

- Allows solution providers to achieve the highest standards in EFB architecture.
- Enables connected aircraft solution development in weeks rather than years.
- Protects aircraft operators and solution providers' investments in product development by providing an extensible framework.
- Is based on open, extensible standards.

Flightman™ is a software framework that offers a complete solution for the connected aircraft; covering business processes, technical documentation and vendor management thus allowing pilots, cabin crew and ground engineers to capture and utilise operational information more efficiently.
