

NOW EVEN EASIER TO USE!

NEW Simple Mode Option - Upload files from OfficeManager or JobMonitor directly to a specific field crew without assigning it to a Customer and Job. Simple Mode can also be used in the field to quickly send or receive files. Jobs and Customers no longer need to be associated with every transfer.

NEW Laptop Field Mode Option for JobMonitor - Allows you to use it on a laptop computer in the field with the FieldKit modem to transfer files between it and the office.

NEW OfficeManager Delete Option - Delete unwanted Customers, Jobs, Crews, Devices, and Logins through the OfficeManager program.

NEW Remember Me Option on the OfficeManager and JobMonitor - Login screens will remember your User ID and Password, so that it does not need to be typed in every time you start the program.

NEW Proxy Server Functionality - Use OfficeManager and JobMonitor on computers which are connected to the internet through a Proxy server.

NEW Easy Cancel Function - Cancel sending a file from OfficeManager or JobMonitor while the transfer is in progress.

IMPROVED Date and Time Recording - The date and time of all file transfers are now recorded using the OfficeSync server's clock, so it does not matter if clock on your data collectors are incorrect, reports will now show the true date and time. A time shift feature has also been added to OfficeManager to allow you to convert times shown in the reports from Eastern Standard Time to your local time zone.

IMPROVED Data Download Memory - OfficeManager and JobMonitor now remember where you last downloaded data to, and uses it as the default download folder. Previously, the desired folder needed to be selected each time.

IMPROVED User Roles Improvements - Control which user logins can access the OfficeManager and JobMonitor programs.

IMPROVED Startup Routine Transfer Function - Startup routines will now detect if a previous transfer has failed, and automatically update the database to reflect this.

The Simple, Accurate and Fast Solution for today's Professional Surveyor.

***"Gives the office a direct
link to its field crews and
the crew a link to the office"***
- POB Magazine

Introducing OfficeSync

A wireless file transfer service from MicroSurvey.

Have you or your fellow Crew, Office Managers or Draftsmen experienced any of the following?

- A rush survey job that stressed everybody out or resulted in a missed deadline?
- Forced you to make multiple trips between survey site and the office because data was missing or not aligning?
- Stuck working late because you had to drive the data back to the office and it's in the opposite direction to your home?
- Decline a job because the crew was too busy?
- Showed up at a remote survey site only to realize you had the wrong information required to complete your survey?

Can you relate to any of the above? Because if you can, you're not alone. Surveyors across North America are switching to a better way.

OfficeSync

OfficeSync enables field crews to send field data directly to the office without leaving the job site. And it works both ways. The office can send stakeout jobs, or any other files, directly to their field crews with the click of a button.

Why are you wasting time and gas driving your data around in a pickup truck?

Compare the Old Way and the OfficeSync Way. Discover how Crews are using the Simplicity, Accuracy and Speed of OfficeSync to make life a whole lot easier for Survey Teams.

Using OfficeSync

OfficeSync is the Field Manager's simple, accurate and fast solution for getting field data back to the office. And then back again!

Office Managers and Draftsmen can send stakeout jobs or any other files, directly to their field crews from any computer in the office ... or anywhere in the world! But the convenience only starts there...

Simple

OfficeSync can be setup in less time that it takes to fix a cup of coffee. OfficeSync support staff are there to make sure that busy Surveyors and Civil Engineers, (Like yourself) don't have to mess around with learning about, 'wireless data transfer' or 'remote file transfer' or any of that techno lingo.

FORGET IT!

With OfficeSync, communication between Field Crews and Office Staff is as easy as sending a fax or email.

Accurate

If the crew needs a revised stakeout plan they can get it from the office in less than a minute. Finished early? Upload the next job and keep your crews working. Not sure if you took enough shots? Get your CAD operator to do a quick check while you are still on site. Does your best customer need that topo right away? No problem. As soon as the job is done you can just Sync Back & Relax.

Fast

The OfficeSync solution allows field crews to easily send their information directly from their data collectors back to the office in seconds without having to leave the job site.

"We were able to calculate the changes in the office while the closest field crew was rerouted to the jobsite. Within an hour of the phone call the crew was on site staking the revised curbing."

Michael High, LS Survey Department Manager LAI Engineering - GA
